

FLIR GF306

SF₆ Optical Gas Imaging Camera

The FLIR GF306 is an optical gas imaging camera that visualizes and pinpoints SF₆ and other gas emissions without the need to shut down operations. This portable, non-contact system allows you to quickly scan wide areas for leaks, so you can begin repairs sooner.

Sulfur Hexafluoride (SF₆) is used in the electric power industry as an insulator and quenching medium for gas-insulated substations and circuit breakers. These facilities have thousands of connections and fittings that need regular inspection, but more than 80% of a gas leaks occur in less than 1% of those components. As a result, crews spend more than 99% of their time inspecting safe, non-leaking parts.

The FLIR GF306 reduces revenue loss by detecting gas leaks efficiently, at a safe distance away from high-voltage areas.

Visualize SF₆ and Many Other Gases

Invisible gases look like smoke through the lens of the GF306, making even the smallest emissions easy to see. Unlike a traditional "sniffer", the camera allows you to survey large areas quickly and effectively and see into spaces that are difficult to reach with non-contact measurement tools. The GF306 is capable of detecting not only SF₆, but several other gases including Anhydrous Ammonia (NH₃), and Ethylene (C₂H₄).

Optical Gas Imaging and Thermography in One

The GF306 accurately measures temperatures up to 500°C as well as detects gas. Integrate this camera into your facility's predictive maintenance program for benefits beyond leak detection.

Meet EPA Regulations

One pound of SF₆ has the same global warming impact of 24,000 pounds of CO₂. It has an atmospheric lifespan of 3,200 years, so even small amounts of SF₆ can have a significant impact on global climate change.

The US Environmental Protection Agency includes optical gas imaging as an accepted leak detection technique in its Greenhouse Gas Reporting Rule.
